BRAINSTORE GROUP · TRANSPORT ERP

Brainstore Transport Package

Comprehensive user manual — operating the platform end to end: administration, fleet, journeys, reservations, parcels, baggage, treasury, accounting and reporting.

Version 1.0 · August 2026 · User Manual

Table of contents

1. Getting started
   Roles, signing in, the interface
2. Administration
   Institutions, agencies, users, roles & permissions

3. Configuration
System & journey configuration (routes, fares, seating, expense barème…)

4. Fleet (Flotte)
Vehicles, drivers, fuel, maintenance, contracts, documents

5. Journeys (Voyages)
Create trips, assign vehicle & crew, lifecycle, expenses

6. Reservations (Réservations)
Passengers, ticket sales at the counter

7. Parcels (Colis)
Register, pay, track, deliver

8. Baggage (Bagages)
Check-in, pay, deliver

9. Treasury (Trésorerie)
Cash registers, sessions, transactions, transfers

10. Accounting (Comptabilité)
Chart of accounts, journals, automatic entries

11. Reporting
Generating branded reports (PDF / Excel / CSV)

12. Appendix
Glossary & everyday tips

CHAPTER 1

Getting started

The Brainstore Transport Package is a multi-company platform for running a passenger-transport business. Each company (institution) works in complete isolation from the others.

1.1 Who does what — the three roles

Role	Purpose	Typical tasks
Super Admin	Runs the platform	Create institutions, manage packages & subscriptions, oversee agencies.
Institution Admin	Runs one company	Create agencies & users, configure journeys and fleet, define roles.
Agent / Operator	Day-to-day counter work	Sell tickets, register parcels/baggage, open a cash register, run trips.

1.2 Signing in

1. Open the application URL in your browser.
2. On the **Sign In** page, enter your **email** (or username) and **password**.
3. Click **Sign In**. If you forgot your password, use **Forgot Password?**.

> NOTE What you see in the left menu depends on your **permissions**. If a module or button is missing, your role does not grant it — ask your Institution Admin.

1.3 Finding your way around

The **left sidebar** groups everything by module: `Voyages` `Flotte` `Trésorerie` `Comptabilité` `Administration` `Reporting`, plus `Config Voyages` for setup. Click a module to expand its sub-pages. Throughout this manual a path such as `Trésorerie → Caisses` means "open Trésorerie in the sidebar, then click Caisses".

CHAPTER 2

Administration

Administration is where the company, its agencies, its people and their access rights are defined. Do this first — everything else builds on it.

2.1 Creating an institution (Super Admin)

An institution is a company on the platform. Creating one automatically seeds its SYSCOHADA chart of accounts, journals, treasury mappings and default journey configuration — so it is ready to operate.

1. Go to **Super Admin → Institutions** and click **New institution**.
2. Fill in the identity: name, legal form, capital, RCCM, NIU/tax id, address, phone, currency, accounting plan.
3. Optionally provide the **first admin** (email, first name, last name) — the platform creates the Institution Admin account.
4. Save. The company is created and bootstrapped.

2.2 Creating agencies

An agency is a branch/office of your company (e.g. BAMENDA, BIYEM-ASSI). Cash registers and ticket-selling points attach to agencies.

1. As Institution Admin, open **Administration → Agences**.
2. Click **Nouvelle agence**, enter the name, code, type (Siège, Agence, Dépôt…), email and phone.
3. Save. Repeat for each branch. You can nest agencies under a parent to model a hierarchy.

2.3 Creating users

1. Open **Administration → Utilisateurs** and click **New user**.
2. Enter identity and email; set the user's **company** and **default agency**.
3. Save — the user receives credentials and can sign in.

2.4 Roles & permissions (RBAC)

Access is controlled by **permissions** (e.g. `voyage.trip.create`, `treasury.session.manage`). You bundle permissions into a **role**, then assign the role to a user. Institution Admins and Super Admins bypass these checks.

To grant an agent the right to sell tickets and run a caisse

1. Go to **Administration → Rôles** and click **New role** (e.g. "Guichetier").
2. Tick the permissions: ticketing/booking, `treasury.session.view/manage`, `voyage.trip.view`, etc.
3. Save the role.
4. Open the user, assign the **role**, and save. The agent now sees exactly those modules.

SCENARIO

Onboarding a new agency with one counter agent

Goal: open the BAMENDA agency and give agent *Chantal* the ability to sell tickets.

1. **Administration → Agences** → **Nouvelle agence** → name "BAMENDA", code "BAM" → Save.
2. **Administration → Utilisateurs** → create Chantal, company = your company, default agency = BAMENDA.
3. **Administration → Rôles** → create "Guichetier" with ticketing + treasury.session + voyage.expense permissions.
4. Assign "Guichetier" to Chantal. She can now open a caisse at BAMENDA and sell.

CHAPTER 3

Configuration

Configuration is the reference data journeys rely on: where you travel, at what price, in which seats, and what a trip costs. It lives under **Config Voyages**.

3.1 The building blocks

Item	What it is
Villes / Points de service	Towns and their stations/agencies. A ticket-selling point is linked to an agency.
Trajets (Routes)	An origin → destination line (e.g. Bamenda → Douala).
Catégories tarifaires (Fare Classes)	Commercial tiers: CLASS, VIP, VIP PREM…
Plans de salle (Seating plans)	Seat layout of a bus type; assigned to vehicles.
Types d'équipage	Crew roles: Chauffeur, Convoyeur, Contrôleur… (a driver type is flagged "conducteur").
Types & natures de colis	Parcel categories used when registering colis/bagages.
Types de dépense & Barème	Expense categories (Carburant, Péage, Ration…) and standard costs per route & class — see §3.3.

3.2 Creating a route

1. Ensure the towns and their service points exist (**Config Voyages → Points de service**).
2. Open **Config Voyages → Trajets** → **Nouveau trajet**.
3. Pick the **origine** and **destination** stations, give it a code (e.g. BDA-DLA), optional distance/duration.
4. Save. The route is now selectable when creating trips and fares.

3.3 Expense types & the barème (standard trip costs)

Define once, and every matching trip inherits its costs automatically.

Step A — expense types

1. Open **Config Voyages → Types de dépense** → **Nouveau type**.
2. Enter a name (e.g. Carburant) and pick its **OHADA charge account** from the dropdown (e.g. 604).
3. Save. Repeat for Péage, Ration chauffeur, Ration convoyeur, Autres…

Step B — the barème

1. Open **Config Voyages → Barème dépenses** → **Nouveau barème**.
2. Choose the **Trajet** and the **Catégorie tarifaire** (e.g. Bamenda→Douala, VIP).
3. Add lines: for each expense type, enter the standard amount (Carburant 40 000, Ration chauffeur 10 000, Péage 3 000…).
4. Save. Every VIP trip created on that route will now start with these expenses pre-filled.

SCENARIO

Setting up a brand-new line

Goal: open the Bamenda → Douala VIP line with a fare and cost barème.

1. Create the two stations under Points de service (Bamenda gare, Douala gare).
2. Create the **Trajet** Bamenda → Douala.
3. Create/confirm the **VIP** fare class and its fare (Config Voyages → Tarifs).
4. Create the **Barème** for (Bamenda→Douala, VIP) with carburant/ration/péage lines.

CHAPTER 4

Fleet (Flotte)

The fleet module tracks your vehicles and everything they consume and cost: fuel, maintenance, insurance contracts, documents, missions and accidents.

4.1 Prepare the fleet reference data

Under Fleet configuration, define the reusable lists first: vehicle categories, fuel types, transmissions, brands & models, document types, tags, intervention types, suppliers and parkings.

4.2 Registering a vehicle

1. Open **Flotte → Véhicules** → **New vehicle**.
2. Select the **model** (brand/model), enter the **licence plate**, VIN, colour, year, category, and the owning agency.
3. Optionally fill acquisition and fiscal values (purchase, catalogue, residual), tank capacity and current odometer.
4. Save. The vehicle is **Available** and can be assigned to trips.

4.3 Recording fuel

1. Open the vehicle (or **Flotte → Carburant**) and click **New fuel log**.
2. Enter date, odometer at fill-up, litres, cost per litre (total is computed), station, and whether it was a full tank.
3. Save. Fuel logs feed the vehicle's consumption & cost history.

> GOOD TO KNOW Fleet fuel logs are the **actual** fill-ups (litres, odometer). The "Carburant" line on a trip's expenses is a separate **per-trip allowance** — the two are intentionally kept apart.

4.4 Maintenance & contracts

- **Services / entretien** — plan a service (intervention type, supplier, planned date). When done, record start/done dates, odometer and cost, plus the next due (km or date).
- **Contrats** — insurance and other contracts: supplier, policy number, start/expiry dates, activation cost, deductible, billing period, plus recurring costs.
- **Documents** — carte grise, assurance, visite technique… with issue/expiry dates for reminders.
- **Accidents** — severity, at-fault, third party, police report, insurance claim, estimated vs actual repair cost.

SCENARIO

Putting a new bus into service

1. Create the brand/model if new, then register the vehicle with its plate at your agency.
2. Attach its documents (assurance, visite technique) with expiry dates.
3. Log the first fuel fill-up and schedule the first maintenance with a next-due km.
4. The bus now appears among eligible vehicles when you assign one to a trip.

CHAPTER 5

Journeys (Voyages)

A journey (trip) is one scheduled departure on a route. This chapter covers creating it, assigning a bus and crew, running its lifecycle, and recording its expenses.

5.1 Creating a trip

1. Open `Voyages → Voyages` → **New trip**.
2. Choose the **trajet**, the **catégorie tarifaire**, and the scheduled departure & arrival times.
3. Save. The trip is created as a **Draft**. If a barème exists for (route, class), its expenses are copied in automatically.

5.2 Assigning a vehicle & crew

1. Open the trip. Under **Véhicule**, pick an eligible bus and confirm — this generates the seat map from the bus's seating plan.
2. Under **Équipage**, add crew members (at least one must be a **driver**). Select each member and click add.
3. Optionally block seats you do not want sold (maintenance, reserved) under the seat grid.

5.3 The trip lifecycle

Action	Meaning & requirement
Soumettre (Submit)	Draft → Pending. Requires a vehicle (with seat plan) and at least one driver.
Départ (Depart)	Pending → Departed. Marks the bus as gone.
Compléter (Complete)	Departed → Completed. The trip is finished.
Annuler / Suspendre / Reprendre	Cancel, temporarily suspend, or resume a trip.
Marquer en retard	Flag a delay with a reason.
Transbordement	Move passengers/parcels/baggage to another bus or trip (e.g. breakdown or overflow).

5.4 Trip expenses & disbursing from a caisse

On the trip's **Dépenses** card you see the inherited/added expenses (status *Prévue*). To pay one out:

1. Add or adjust any expense lines while they are *Prévue* (choose the type and amount).
2. In **Caisse de décaissement**, choose the open cash register the money leaves from.
3. Click **Décaisser** on the line. The amount leaves that caisse, an OHADA entry is posted (debit the charge account, credit the caisse), and the line becomes *Décaissée*.

> REQUIREMENT You must have an **open cash session** to disburse. If the dropdown is empty, open your caisse first (see Chapter 9).

SCENARIO

Running the 08:00 Bamenda → Douala departure

1. Create the trip (Bamenda→Douala, VIP, today 08:00). Its expenses pre-fill from the barème.
2. Assign bus *LT 762 MF* and add the driver + convoyeur.
3. Open your caisse; on the Dépenses card choose that caisse and **Décaisser** the carburant and rations.
4. Sell tickets (Chapter 6), then **Soumettre** → **Départ** at departure time → **Compléter** on arrival.

CHAPTER 6

Reservations (Réservations)

Selling tickets at the counter. Each paid booking automatically records a treasury movement and an accounting entry.

6.1 Selling a ticket

1. Make sure your **cash session is open** (Chapter 9) — cash sales require it.
2. Open the sales/booking screen and pick the **trip** (departure) and **seat(s)**.
3. Enter the **passenger** (or select an existing one) and the **fare class**.
4. Choose the **payment method** and the amount received; confirm. The ticket is issued and can be printed.

> **BEHIND THE SCENES** A cash sale posts an income movement in your caisse and an OHADA entry (debit 571 caisse, credit 706 ticket sales). Non-cash (transfer/mobile money) posts to the bank account.

SCENARIO

Two VIP tickets for tonight's departure

1. Open your caisse for the day.
2. Select the 20:00 Bamenda → Biyem-Assi VIP trip and pick two seats.
3. Enter each passenger, confirm cash payment. Two tickets print; your caisse balance rises by the total.

CHAPTER 7

Parcels (Colis)

Registering, paying, tracking and delivering cargo sent between service points.

7.1 Registering a parcel

1. Open **Voyages → Colis** → **New parcel**.
2. Choose the **point de départ** and **point d'arrivée** (they must differ), the parcel **type**, description, weight and pieces.
3. Enter the **sender** and **recipient** details (name, phone, recipient ID).
4. Enter the **amount due** and the amount received / payment method; save. A reference (e.g. COL00042) is generated and the shipping fee is booked to treasury (account 707).

7.2 Tracking & delivery

- Status flows: **Enregistré** → **Chargé** → **Réceptionné** → **Livré** (or Annulé).
- When loaded onto a trip, link the trip; on arrival mark it **Réceptionné**.
- To deliver: mark **Livré**, record who collected it and the ID they presented.

SCENARIO

Send a parcel from Bamenda to Douala

1. Register the parcel (Bamenda → Douala), sender & recipient, amount 8 000, cash — fee posts to treasury.
2. Load it on the departing trip (status Chargé).
3. At Douala, mark Réceptionné; when the recipient collects it with ID, mark Livré.

CHAPTER 8

Baggage (Bagages)

Checking in a passenger's baggage on a known trip, charging any excess, and delivering it at destination.

8.1 Checking in baggage

1. Open **Voyages → Bagages** → **New baggage**.
2. Select the **trip** (the departure is known at check-in). Optionally link the passenger's **ticket**; otherwise enter the sender's identity.
3. Enter the type, description, weight and number of items. The system computes any **excess** over the free allowance.
4. Enter the fare and amount received / payment method; save. A tag (e.g. BAG00007) is generated and the fee is booked to treasury (account 706). Free baggage (0) generates no movement.

8.2 Delivery

Status flows **Enregistré** → **Chargé** → **Retiré**. To hand it over, mark **Retiré** and add a collection comment if needed.

SCENARIO

Excess baggage at check-in

1. Open baggage check-in for the passenger's trip and link their ticket.
2. Enter 30 kg — the system charges the excess over the free allowance.
3. Collect the fee (cash) → it posts to your caisse; print the tag.

CHAPTER 9

Treasury (Trésorerie)

Cash registers, daily sessions, movements and transfers. Every sale (tickets, parcels, baggage) and every disbursed trip expense flows through here — and posts automatically to accounting.

9.1 Cash registers & the daily session

1. Create a caisse under **Trésorerie → Caisses** (name it, attach it to an **agency**).
2. Each day, **open a session** (**Trésorerie → Sessions** → **Open session**): pick the caisse and confirm the opening balance.
3. Work through the day — sales and expenses move money in/out of this open session.
4. At day's end, **close** the session: enter the **counted** balance. The system computes the expected balance and the **écart** (excédent/manquant).

9.2 Movements & transfers

- **Transactions** — income/expense movements with a category; most are created automatically by sales & expenses, but you can add others.
- **Transferts** — move money between caisses and bank accounts (posts a matching OD accounting entry).
- **Comptes bancaires** — bank accounts used for non-cash receipts.

> **AUTOMATIC ACCOUNTING** Opening/using a caisse never requires manual bookkeeping: each movement posts an OHADA entry, and closing differences post to écart accounts (658 shortfall / 758 surplus).

> **SCENARIO**
>
> **A cashier's day**
>
> 1. Morning: open your caisse with the opening float.
> 2. Day: sell tickets, register parcels/baggage, disburse trip expenses — all from this caisse.
> 3. Evening: count the cash, close the session; the écart shows any surplus/shortfall.
> 4. Run **Journaux de vente** in Reporting to review the session (see Chapter 11).

CHAPTER 10

Accounting (Comptabilité)

The SYSCOHADA-compliant ledger. Most entries are generated automatically from treasury; accountants can also post manual entries and review the books.

- **Plan comptable** — the chart of accounts (class 5 treasury, class 6 charges, class 7 products…), seeded per company.
- **Journaux** — sales, purchases, cash (CAISSE), bank (BANQUE), miscellaneous (OD).
- **Exercices & Périodes** — fiscal years and periods; close a period when done.
- **Écritures** — double-entry, gap-less numbering, immutable once posted, reversible by contre-passation.

> **WHERE ENTRIES COME FROM** Ticket sales → 706, parcels → 707, baggage → 706, trip expenses → their configured charge account; each balanced against the caisse (571) or bank (521).

CHAPTER 11

Reporting

Generate branded statements as PDF, Excel or CSV, filtered by period, agency, caisse, vehicle or year.

11.1 Generating a report

1. Open **Reporting → Rapports**.
2. Choose the **report** from the list.
3. Fill the **filters** shown for that report (dates, agency, caisse, vehicle, year).
4. Pick the **format** (PDF / Excel / CSV) and click **Générer** — the file downloads.

11.2 Available reports

Report	What it shows
Dépense	Trip expenses paid, by trip/vehicle/type and the caisse that paid.
Recette	Ticket receipts grouped by caisse (and cashier).
CA (production)	Turnover by agency × month.
Récapitulatif	Per vehicle: revenue (voyage/bagage/colis) − expenses = margin.
Journaux de vente	Per session: opening/expected/actual balance and écart.
Voyages	Trips with reservation & parcel totals.
Réservation / Bagages / Colis	Transactional lists of tickets, baggage and parcels.

SCENARIO

End-of-day review for a manager

1. Run **Journaux de vente** for today, filtered to the agency — check each caisse's écart.
2. Run **Recette** for today to see receipts by cashier.
3. Run **Récapitulatif** for the period to see each bus's margin (revenue − expenses).

CHAPTER 12

Appendix

Glossary

Term	Meaning
Institution	A company on the platform (fully isolated from others).
Agence	A branch/office; caisses and selling points attach to it.
Caisse / Session	A cash register and its daily open/close cycle.
Trajet	A route (origin → destination).
Voyage	One scheduled departure on a trajet.
Barème	Standard trip costs per (route × fare class).
Décaisser	Pay an expense out of a chosen caisse.
Écart	Difference between counted and expected cash at close (surplus/shortfall).
OHADA / SYSCOHADA	The West/Central-African accounting standard used by the ledger.

Everyday tips

- Open your caisse **before** selling or disbursing — cash operations need an open session.
- Configure the **barème** once per line so every trip inherits its costs.
- If a menu/button is missing, it is a **permission** — ask your Institution Admin.
- Reports are always available in **PDF, Excel and CSV** — use Excel/CSV for further analysis.
- Keep vehicle **documents** up to date with expiry dates so nothing lapses.
